

About me

Engineer and entrepreneur building developer productivity tools. Ten years designing extensible systems, leading cross-team initiatives, and shipping features used by millions.

Co-founded a developer tools startup acquired by Microsoft. Led the product from prototype through sales to acquisition, gaining experience across the full business and technical lifecycle.

Two patents in real-time 3D visualization. Former Amazon intern.

Outside of work, bootstrapped a 3D printing business.

Select Experience

Microsoft

2016 - present

Senior Software Engineer on the **Visual Studio Editor** team

Seattle, WA

Technical impact

Designed and evolved extensible Visual Studio Editor APIs, maintaining long-term compatibility while leading the transition from synchronous to asynchronous data providers (IntelliSense, Quick Actions, File I/O, Plugin initialization).

Defined durable API contracts that balanced backward compatibility with modern async patterns, enabling safe evolution across multiple release cycles and partner integrations.

Developed AI-assisted coding features through prompt engineering and iterative evaluation of quality, latency, and token usage.

Leadership impact

Served as Designated Responsible Individual for major features, leading cross-team design and execution, and owning delivery through production.

Coordinated cross-org security on-call rotation; served as security subject matter expert for the Editor, driving timely MSRC resolution and secure-by-design practices.

Made feature decisions through A/B experimentation and telemetry analysis across millions of users.

Code Connect

2014 - 2016

Co-founder of developer tool startup, acquired by Microsoft

Waterloo, ON

Built and sold interactive programming tool **Alive** to developers, enterprises, and educators worldwide.

Owned product end-to-end: prototyping, integrating with **Roslyn** compiler, marketing, sales, customer support.

Profiled and optimized execution paths to maintain responsive UX during compute-intensive operations.

Awards: 4th Year Design Cup winner (2014), Velocity Fund pitch winner (2015), Microsoft MVP (2016)

Schlumberger Information Solutions

2012

Software Engineering Intern on **Petrel** team

Stavanger, Norway

Invented patented techniques for real-time 3D visualization of large-scale seismic datasets (US20120254781, US20130235696).

Shipped features in tight iteration cycles alongside domain experts who used the software immediately.

Prototyped novel input device integrations and 3D lighting control interfaces.

Education

University of Waterloo

2009 - 2014

Bachelor of Applied Science, Honors **Computer Engineering** with **cognitive science minor** and distinction.

Interests

Side projects: Custom light brush for long exposure photography, 3D printing, contributing to Home Assistant, project combining CloudFlare workers KV with MCP memory.
